/ Quiz: Error Dotoot	tion, Correction, and Control Problems				
/ Quiz. Litor Detect	tion, correction, and control Problems				
	Started on Wednesday, 6 October 2021, 10:07 AM				
State					
	Completed on Tuesday, 12 October 2021, 4:58 PM				
	Time taken 6 days 6 hours				
Grade	98.71 out of 100.00				
Question 1					
Correct					
Mark 1.71 out of 2.00					
Walk 1.7 F dat of 2.50					
Select all the items	that can cause transmission errors:				
Penalty regime: 339	%, 66%, 100%				
Select one or more					
🗸 a. Thermal no	oise (noise generated by random thermal motion)	~			
b. Interference	ce (two waveforms colliding)	~			
c. Weak sign	al strength	<i>y</i>			
d. Faulty rout	iers	•			
e. Jamming	of a signal	~			
✓ f. Crosstalk ((signals in one circuit interfering with signals in another circuit)	~			
g. Jitter (vari	ations in signal timings)	•			
Your answer is corr	ract				
		, ainmal			
	rs are: Thermal noise (noise generated by random thermal motion), Interference (two waveforms colliding), Weak Iters, Jamming of a signal, Crosstalk (signals in one circuit interfering with signals in another circuit), Jitter (varia				
signal timings)	ners, our mining of a signal, or ossitalit (signals in one should interfer ing with signals in another should, other (varia	tiono in			
Correct					
	ssion: 2.00/2.00. Accounting for previous tries, this gives 1.71/2.00.				
Question 2					
Correct					
Mark 2.00 out of 2.00					
Using odd parity w	hat is the parity bit if the frame is 01010111?				
	ional parity bit, rather than the full codeword				
-					
Penalty regime: 100	0%				
Answer: 0	~				
The correct answer	ris: 0				
Correct					
Marks for this submis	esion: 2 00/2 00				

What is the partial sum on E34F and 2396? If there is carry on the leftmost bit, please add it to the sum.

Please give the answer in hexadecimal.

Penalty Regime: 33%, 66%, 100%

Answer: 06E6 ✓

The correct answer is: 06E6

Correct

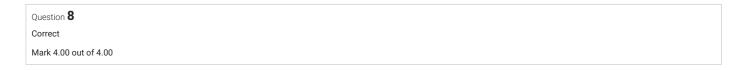

Mark 2.00 out of 3.00

Marks for this submission: 3.00/3.00. Accounting for previous tries, this gives 2.00/3.00.

Information

In CRC suppose we are given a divisor pattern, G=110011 and a data block D=11100011, apply CRC to detect errors.

Please answer the following questions.

What would be the size in bits of the Frame Check Sequence (FCS)?

Penalty Regime: 33%, 66%, 100%

The correct answer is: 5

5

Correct

Answer:

Marks for this submission: 4.00/4.00.

What is the corresponding Frame Check Sequence (FCS)? Please enter the FCS in the binary format.

Penalty regime 33%, 66%, 100%

Answer: 11010 ✓

The correct answer is: 11010

Correct

Information

Suppose there are senders A and B that want to send data between each other although there is interference on the channel connecting them. To overcome this issue both A and B agree on a Hamming code to use so that errors can be detected or corrected (depending on the severity of the error). The messages and the codewords they map to are given below.

,			
Message	Codeword		
0000	0000000		
0001	0001111		
0010	0010011		
0011	0011100		
0100	0100101		
0101	0101010		
0110	0110110		
0111	0111001		
1100	1100011		
1101	1101100		
1110	1110000		
1111	1111111		
1000	1000110		
1001	1001001		
1010	1010101		
1011	1011010		

With this information, answer the following questions.

Question 10	
Correct	
Mark 2.00 out of 2.00	

Suppose that user A sends user B the codeword 0110110. Assuming there were no errors, what is the message that user B has received? Penalty Regime: 33%, 66%, 100%

Answer: 0110

The correct answer is: 0110

Correct

↑

Quiz: Error Detection, Correction, and Control Problems: Attempt review			
Question 14			
Correct			
Mark 2.00 out of 2.00			
correct up to two errors, o	Hamming codes that are extended with an additional parity bit, providing the ability to detect up to three errors, or simultaneously correct up to one error and detect up to two errors. How would the code rate of the extended to normal Hamming codes? The code rate is defined as the ratio of the number k of user data bits to the total oded message (which includes the user data and redundant bits), i.e. k/n.		
Penalty Regime: 100%			
Select one:			
a. The code rate of	the extended hamming code would be smaller.		
b. The code rate of	the extended hamming code would be larger.		
Your answer is correct.	e code rate of the extended hamming code would be smaller.		
	e code rate of the extended namining code would be smaller.		
Marks for this submission: 2.	.00/2.00.		
Question 15			
Question 15 Correct			

 $\ \bigcirc$ a. ARQ is open loop error control as ARQ does not send feedback

b. ARQ is closed loop error control as ARQ sends feedback

Your answer is correct.

The correct answer is: ARQ is closed loop error control as ARQ sends feedback

Correct

15/10/2021 Quiz: Error Detection, Correction, and Control Problems: Attempt review Question 16 Correct Mark 3.00 out of 3.00 Match the following descriptions with the corresponding ARQ types. Penalty regime: 33%, 66%, 100% For all packets, the sending station waits for an acknowledgement for the last packet before sending the next Stop-and-wait ARQ packet When an error is detected, the frame in question is retransmitted, as well as all subsequent frames that have Go-back-N ARQ been previously transmitted, after the last acknowledgement. Selective-Repeat ARQ With a window size greater than 1, when an error is detected, only the frame in question is retransmitted. Your answer is correct. The correct answer is: For all packets, the sending station waits for an acknowledgement for the last packet before sending the next packet - Stop-and-wait ARQ, When an error is detected, the frame in question is retransmitted, as well as all subsequent frames that have been previously transmitted, after the last acknowledgement. → Go-back-N ARQ, With a window size greater than 1, when an error is detected, only the frame in question is retransmitted. → Selective-Repeat ARQ Correct Marks for this submission: 3.00/3.00 Question 17 Correct Mark 2.00 out of 2.00 If stop and wait is treated like a sliding window scheme, what is the maximum window size? Penalty Regime: 33%, 66%, 100% Select one: a. 0 b. 1 oc. 2 od. 3 e. 4

Your answer is correct.

The correct answer is: 1

Correct

Marks for this submission: 2.00/2.00

Information

Two neighbour nodes (A and B) use the ARQ mechanism stop-and-wait for their data transfer. Assuming A is transmitting and B is receiving, show the number of usable sequence numbers at A for the following succession of events.

After A sends frame 0, but before A receives an acknowledgement from B for 0, the number of usable sequence numbers at A becomes

0

~ .

Penalty regime: 33%, 66%, 100%

Correct

Marks for this submission: 2.00/2.00.

Question 19 Correct

Mark 2.00 out of 2.00

After A sends frames 0 and receives acknowledgement from B for 0, the number of usable sequence number at A

~

Penalty regime: 33%, 66%, 100%

Correct

Marks for this submission: 2.00/2.00.

Information

Two neighbor nodes (A and B) use go-back-N with a 3-bit sequence number and a window size of N=4. Assuming A is transmitting and B is receiving, show the window positions (sequence numbers currently in the window) for the following succession of events.

Question **20**Correct

Mark 2.00 out of 2.00

Before A sends any frames, the number of usable sequence numbers of A is

~

Penalty regime: 33%, 66%, 100%

Correct

Question 21	
Correct	
Mark 2.00 out of 2.00	

Before A sends any frame, the first usable sequence number in the sliding window of A is

Penalty regime: 33%, 66%, 100%

Marks for this submission: 2.00/2.00.

Question 22

Correct

Mark 2.00 out of 2.00

After A sends frames 0, 1, 2 and receives acknowledgement from B for 0 and 1, the number of usable sequence number of A becomes

Penalty regime: 33%, 66%, 100%

Correct

Marks for this submission: 2.00/2.00.

Question 23

Correct

Mark 2.00 out of 2.00

After A sends frames 0, 1, 2 and receives acknowledgement from B for 0 and 1, the sequence number of the next new frame of A is

Penalty regime: 33%, 66%, 100%

Correct

Correct

Question 24

Mark 2.00 out of 2.00

After B receives frames 0, 1, 2 and acknowledges 0, 1, 2, B expects the sequence number of the next in-order packet to be

3

~

Penalty regime: 33%, 66%, 100%

Correct

Marks for this submission: 2.00/2.00.

Question 25

Correct

Mark 2.00 out of 2.00

After A sends frames 3, 4, and 5 and B acknowledges 4 and the ACK is received by A, the number of usable sequence numbers at A becomes

3

~

Penalty regime 33%, 66%, 100%

Correct

Marks for this submission: 2.00/2.00.

Question 26

Correct

Mark 2.00 out of 2.00

After B receives frames 3 and 4, B expects the sequence number of the next in-order packet to be

5

Penalty regime: 33%, 66%, 100%

Correct

Marks for Marks for Mark 2.00 c Which correct Penalty Select correct a. b.	or this submission: 2.00/2.00. 6 Dut of 2.00 of the following statements are correct about TCP flow control? regime: 33%, 66%, 100% one or more: TCP flow control is a speed-matching service. In TCP flow control, the sender maintains a variable called receive window (RcvWindow) which tells itself how much free buffs space is available at the receiver. TCP specification requires the sender to continue to send one-data-byte segments to its receiver even if the receiver's buffer is full.	

The correct answers are: TCP flow control is a speed-matching service., In TCP flow control, the sender maintains a variable called **receive window** (RcvWindow) which tells itself how much free buffer space is available at the receiver. TCP specification requires the sender to continue to send one-data-byte segments to its receiver even if the receiver's buffer is full.

Correct

15/10/2021 Quiz: Error Detection, Correction, and Control Problems: Attempt review Question 37 Correct Mark 2.00 out of 2.00 When TCP does the round-trip time sampling, it never computes a sample round-trip time (SampleRTT) for a segment that has been retransmitted. Why? Penalty regime: 33%, 66%, 100% Select one or more: a. A retransmitted segment is more likely to be corrupted. b. Retransmission can cause network congestion. c. A retransmitted segment is more likely to be delayed or lost again. 🗾 d. If a sender retransmits a segment and receives its ACK, it does not know whether this ACK corresponds to the earlier segment or 🛩 the retransmitted segment. The round-trip time estimation becomes inaccurate. Your answer is correct. The correct answer is: If a sender retransmits a segment and receives its ACK, it does not know whether this ACK corresponds to the earlier segment or the retransmitted segment. The round-trip time estimation becomes inaccurate. Correct Marks for this submission: 2.00/2.00 Question 38 Correct Mark 2.00 out of 2.00 Which of the following statements are correct in regarding to TCP reliable data transfer service? Select one or more: a. The reliable data transfer mechanism in TCP is different from both Go-back-N and Selective Repeat. b. Some segments can be retransmitted before timeout. This is called fast retransmit. c. TCP usually uses cumulative acknowledgements. d. When there is a timeout, the sender retransmits all not-yet-acknowledged segments. Your answer is correct. The correct answers are: TCP usually uses cumulative acknowledgements., Some segments can be retransmitted before timeout. This is called fast retransmit., The reliable data transfer mechanism in TCP is different from both Go-back-N and Selective Repeat. Correct

1

15/10/2021	Quiz: Error Detection, Correction, and Control Problems: Attempt review
Question 39	
Correct	
Mark 3.00 out of 3.00	
	connection begins, its congestion window (CongWin) is initialised to 1MSS (Max Segment Size) and the threshold for ow TCP is in the Slow Start phase. Roughly after how many round trips, CongWin will grow to the threshold?
